It's time for smart living

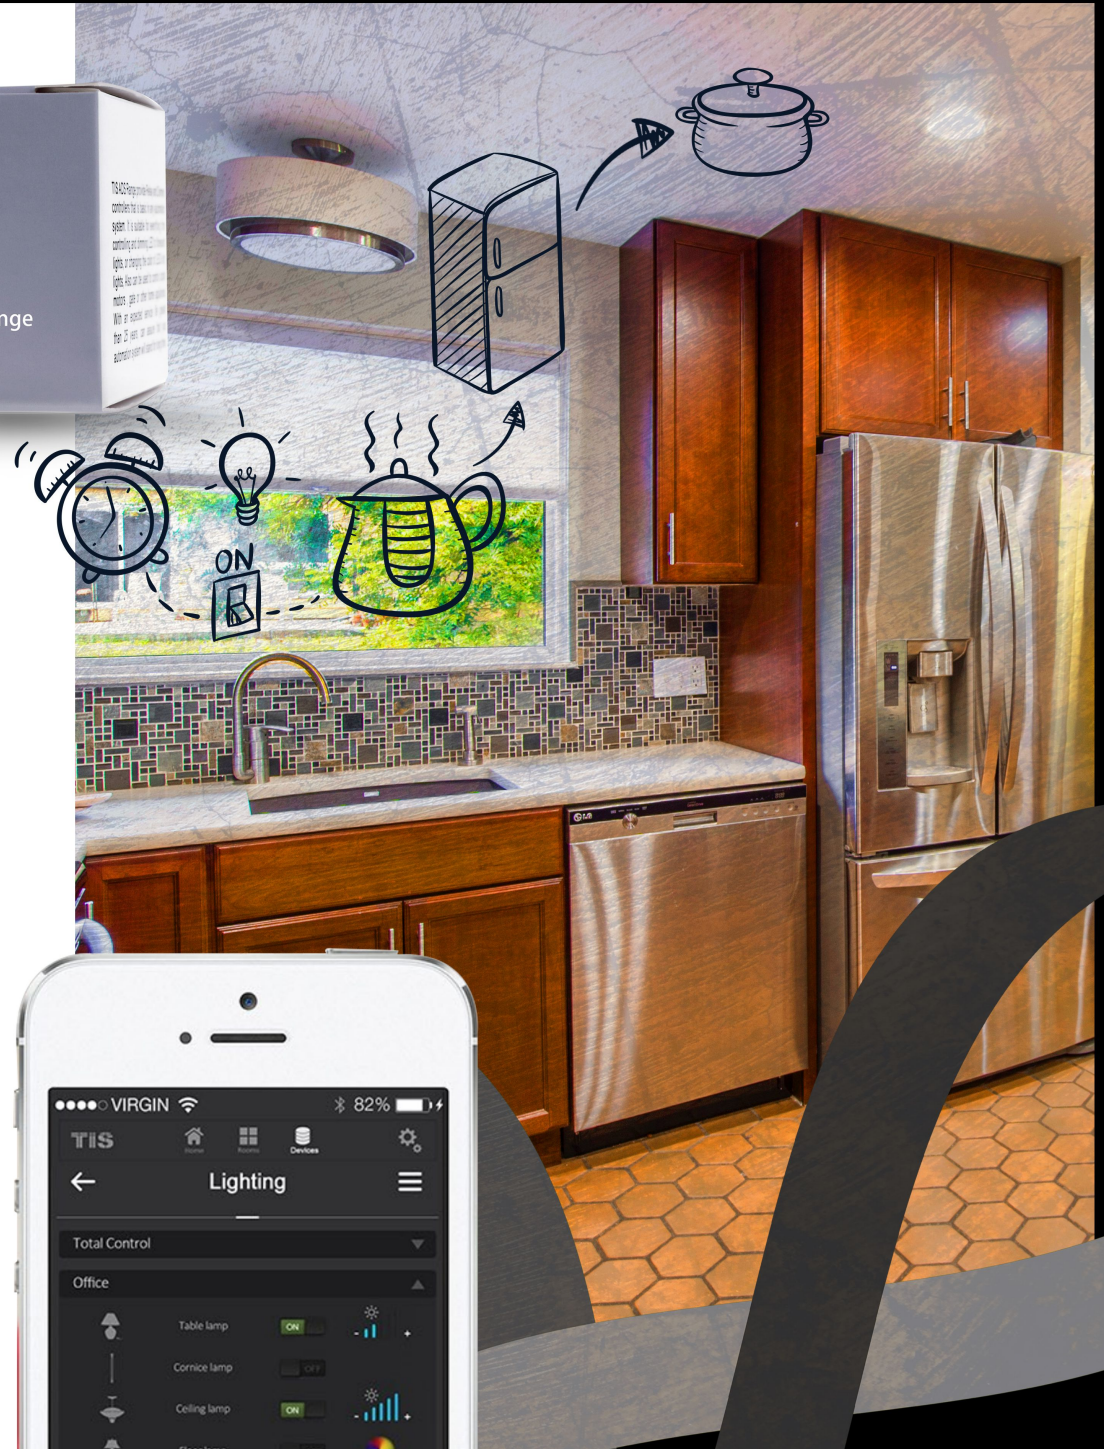

# LET YOUR HOME

# TAKE CARE OF YOU

Always aiming to outperform our costumers' needs in the most efficient way, TIS smart home manufacturing presents the simplest WIFI ADS controllers on the market for operating any kind of electrical home appliance (for example, on/off, dimming, sequential layouts, and RGB colors for lights).

Below is a brief review of the 3 main products offered in this series:

**ADS Relays:** This package includes 2/3 channel relay switches and is used to control lights, shutters, and other electrical appliances on its mounting locale.

This high-tech relay helps minimize classic light switches, but even if you are a fan of classic technology, ADS Relays are combinable with old light switches. This way the living room lights, for example, work with both manual wall switches and your smart phone.

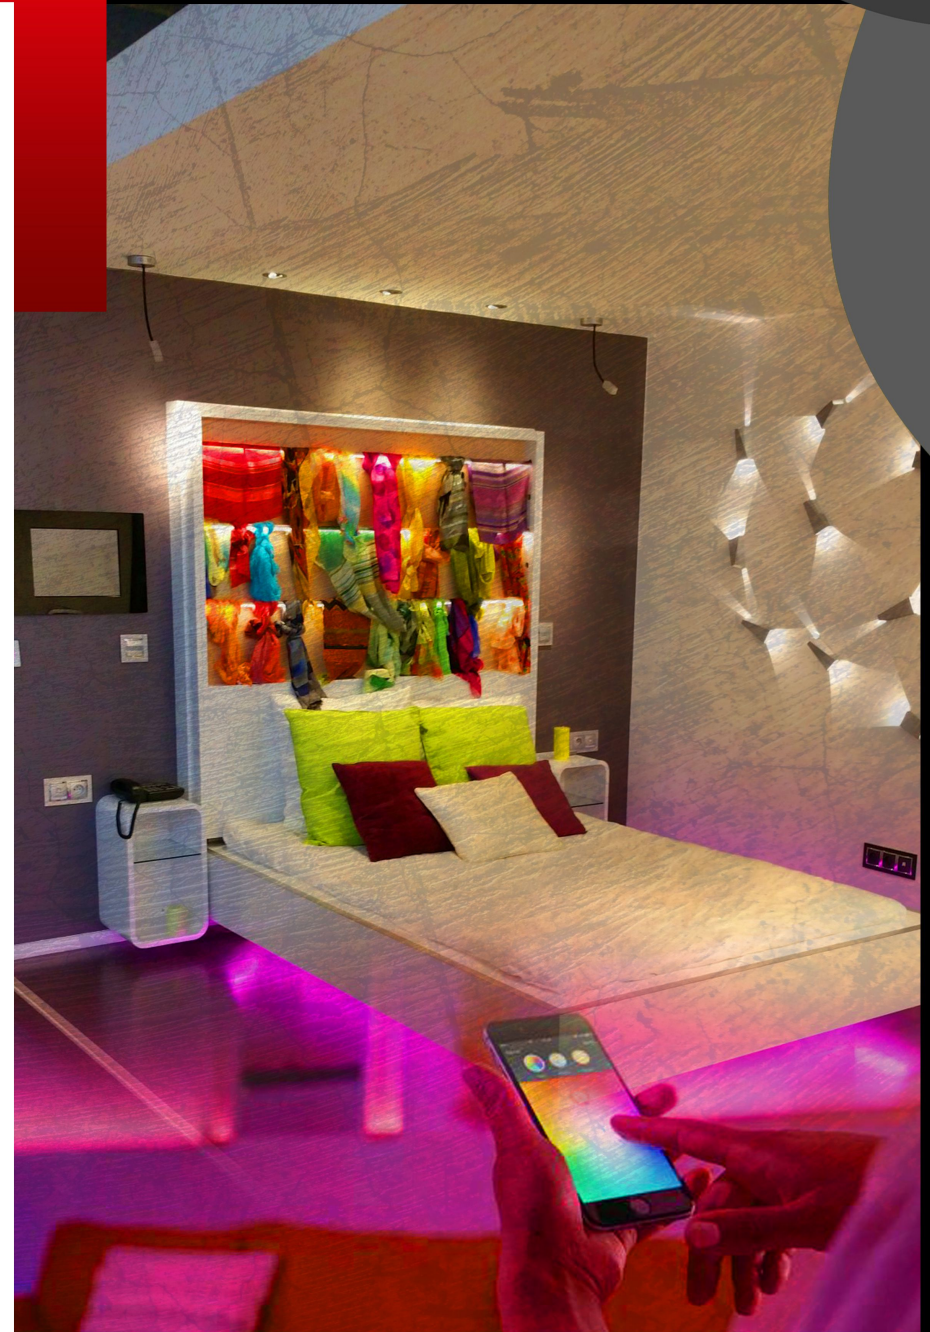

**ADS Dimmer:** This smart solution is capable of dimming every kind of lamp. Fully functional and designed to fit any lifestyle, ADS Dimmers enable you to create your favorite atmosphere for any mood or activity simply by setting the perfect light level.

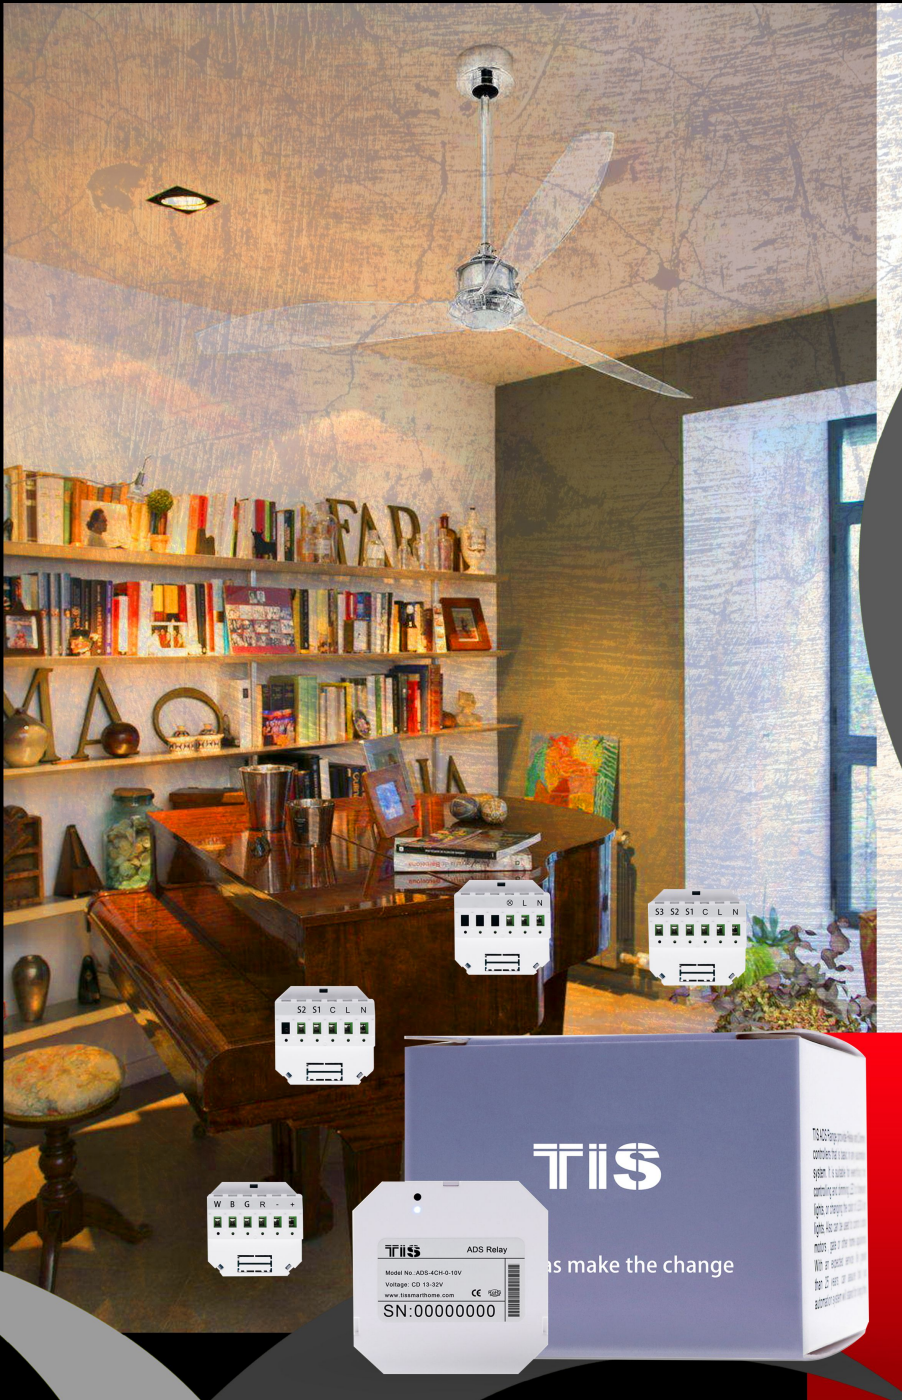

**ADS RGBW:** With its numerous color options, this device is the cutting-edge of innovation in interior lighting. Along with the primary colors of red, green, blue and white, ADS RGBW can create end-to-end sequential color shades to match any design specification. Having a birthday party? You can define your favorite color theme and integrate the atmospheric lights with your selected music.

As a WIFI series, all of these products are set and controlled using the TIS mobile app for iOS or Android, so there is no boundary to your commands. You can control your home from anywhere.

Moreover, they are compatible with Amazon's virtual assistants' Echo and Alexa, so you can simply speak your commands, and the ADS controllers will perform them.

Low

Middle

High

Each product also has a timer that you can use to schedule all use. For example, you can set your ADS Relay to open the water faucet to fill the pool every holiday when you want to spend some quality time with family. Or, you can set the ADS Dimmer to display dim blue light each weekend when you want to watch a documentary. Also, ADS RGBW can be programmed to alter a bedroom's light to warm white each evening when your child wants to do her/his homework.

ADS Relays and Dimmer are equipped with an energy meter that provides current, monthly, and annual reports on energy consumption and will notify you when the system is consuming too much energy.

This package offers the perfect combination technology leadership and tasteful expertise to make a safer, greener, and more efficient world.
