

# GAS SENSOR

# EXPAND YOUR HOME'S INTELLIGENCE

Combustible gas leaks can be as dangerous as water or smoke leaks. There are sensors designed specifically to identify the presence of these types of gas in your space; among them is the **Zigbee-powered Gas Sensor** with many beneficial qualities.

EXPAND YOU

# OUR HOME'S INTELLIGENCE

It becomes a part of your connected Internet of Things (IoT) and is controllable via your smartphone, tablet, PC, or other WiFi-enabled device. This way, if the gas density in the air exceeds the standard level, it can work with other solutions in the house to execute a chain of smart actions to prevent danger.

The alert notification is another advantageous feature of this device. Literally wherever you are, you'll get notified about the health status of your home and will always have enough time to take the necessary actions.

You can mount this device everywhere in your home where there is the risk of gas leaking and be assured that it will work flawlessly without any interference from smoke or oil.

Install and run this gas sensor yourself; it comes with a free installation tool, so you just need to plug it in and use it. Moreover, it comes with a smart and attractive design so your interior scheme won't be compromised.

This sensor has a lot to offer because we believe the art in technology is the production of small things that bring big changes.
