

Switch Module

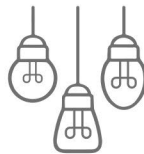

TIS-BEE-SW2-2R

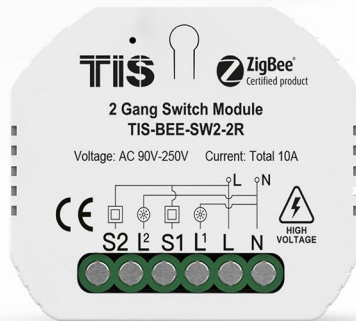

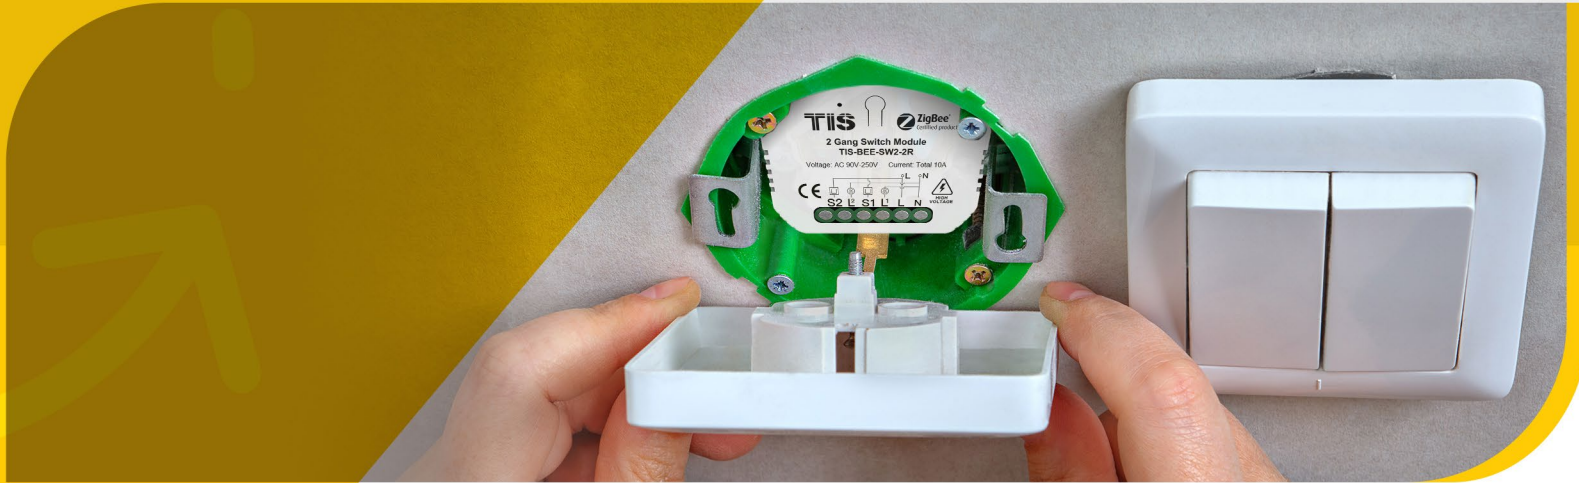

Intelligent home experience is not estimated based on how many smart devices are there around, but on the quality of smart function that a single component might have. After all, smart tech is not limited to penthouses and a multi-room arena.

TIS smart modules come in different channels and features, allowing you to make a choice based on your needs. The Zigbee-enabled Switch Module is a good example of a solution with precise function in light control, ideal for small spaces with a noncomplex lighting system.

This module has two 10-amp relay channels and comes quite handy in the case of light control across home and office rooms. Its simple installation and operation let you replace old light switches with a pair of intelligent ones within a short minute period.

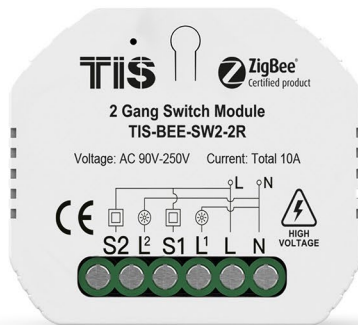

Once mounted, you can manage your home's lights using only your phone from anywhere. Whether on the move, on vacation, or at work, grab your phone, open your TIS App, and navigate through different lamps, chandeliers, or spotlights around the room.

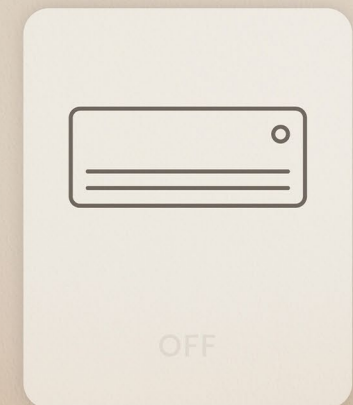

Powered by the latest Zigbee 3.0 version, this module can be integrated into your TIS automation system to offer seamless and smooth performance. Also, it does not require rewiring; you don't have to worry about the inconveniences that adding a new solution to home automation might have.

In other words, even if your domicile is built long ago and is not considered modern in its wiring structure, you can still enjoy a smart lifestyle.

Devices

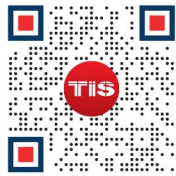

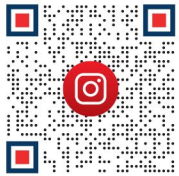

Another benefit of this module is that it acts as a signal repeater among devices that might be somewhat distant. Imagine the motion sensor in your home automation is mounted on the second floor in your duplex building, while the smart switch that receives and sends data to this sensor is installed in the corridor.

Now because, due to distance, there might be some malfunction between these two devices, you can have this switch module installed midway to repeat and augment the signal for utmost efficiency.

Add Zigbee Switch Module to your smart home hub and enhance the quality of living.
