It's time for smart living

LET'S BRIGHTEN OUR LIVES

Light plays an important role in our memories. It can alter our feelings in a split second. Lighting is also important in interior design. That's why various and sundry types of lights have been introduced in the last decade. In the ever-competitive market of home automation devices, the TIS Company proudly presents our Leading Edge Dimmer modules, which help you easily create your perfect mood for any situation with your favorite light levels.

Explore automatic lighting in your home with LE Dimmers: 2CH (channel)/6A module, 4CH/3A module, and 6CH/2A module. These dimmers function with TRIAC technology and can be utilized to dim incandescent and halogen lights.

Mood creation is very simple with LE Dimmers. Imagine the lights of wedding hall corridor dimmed down as the flower girls enter to the rhythm of a dreamy song and prepare the audience for the bride's entrance. LE Dimmers can make a moment unforgettable.

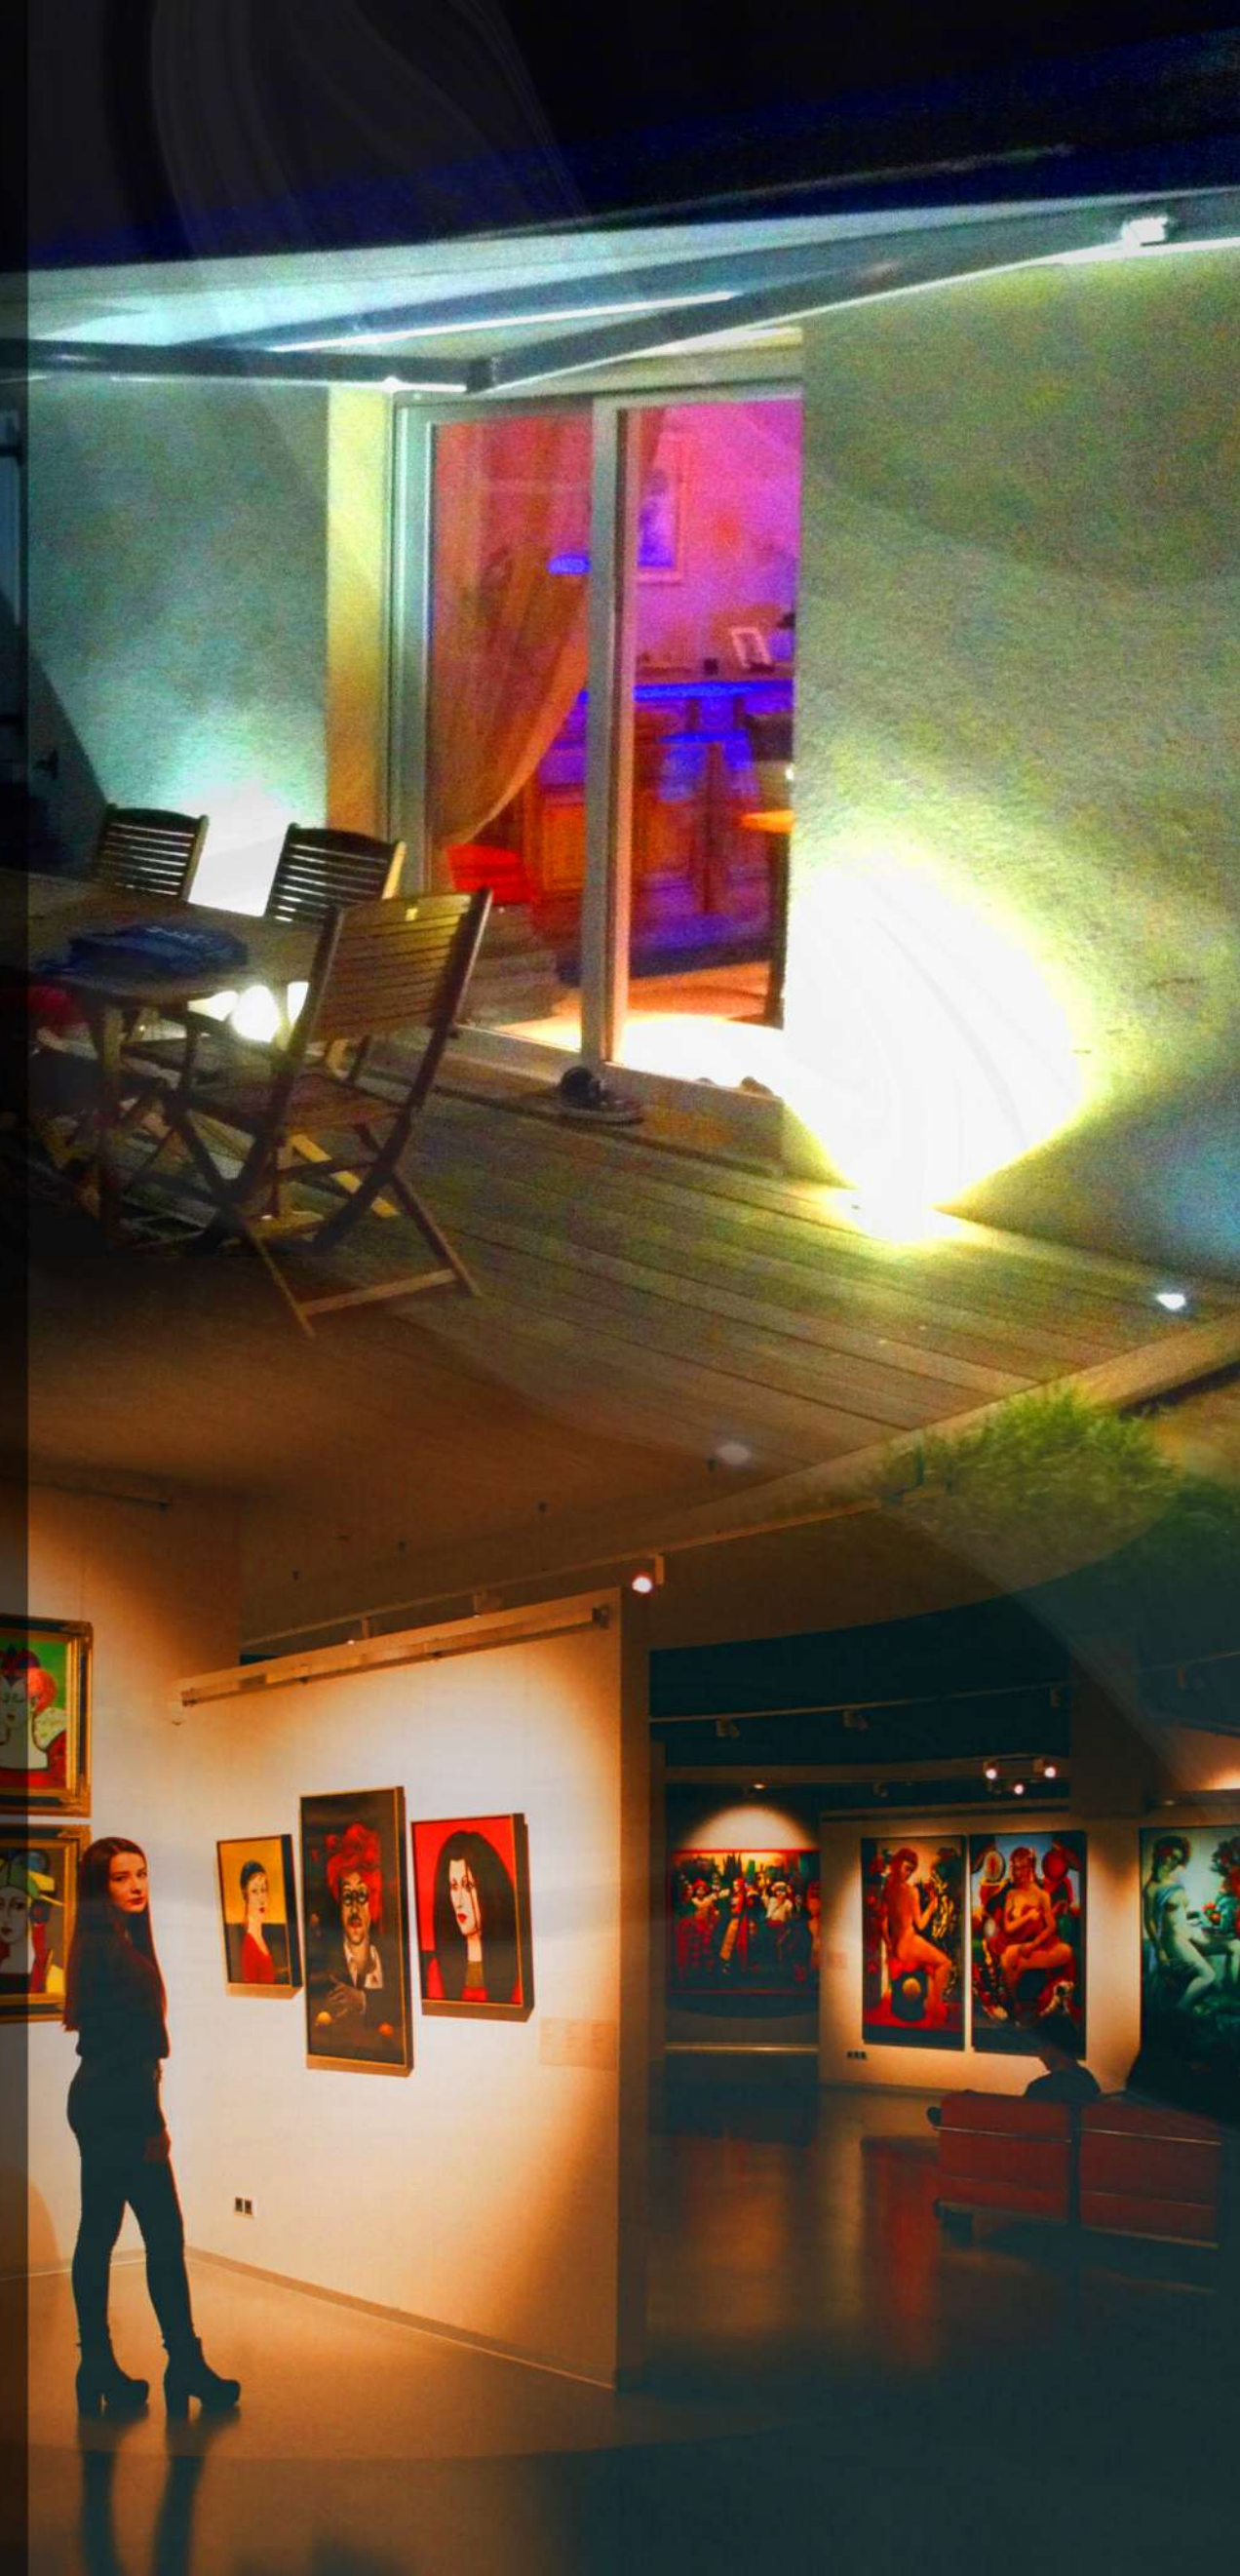

If coupled with a TIS Motion Detector Sensor, LE Dimmers can automatically dim down or lighten up the atmosphere based on room occupancy. This avoids considerable energy waste. Also, the LE Dimmer's functionality is not limited to the number of lights; since this solution works in the TIS-BUS system, it can be linked to another module to dim as many lights as you want simultaneously.

Even more, this solution's capabilities are not limited to lights. Ceiling fans are also controllable with LE Dimmers. And thanks to high fuse protection, your electrical appliances stay intact in the case of any current overload/shortage.

This package also features a side button design so that manual control can be enabled in emergency situations.

LE Dimmers are here to help you create memorable theater and dining atmospheres, party time, or any life experience in which lights shape how you feel.
