**WATER  
LEAKAGE**

**TIS**  
CONTROL EVERYTHING

Water leak sensors are designed for new-generation smart homes. Either wired or wireless, they help to prevent flood damage and are a critical part of your home automation. Although there is a wide variety of leak detectors on the market, we recommend the Zigbee-powered Water Leakage Sensor with many helpful features.

This device is a wireless, simple-to-install, and easy-to-connect detector that senses and alerts you of leaks. You can put it in areas like basements, bathrooms, or cabinets, so as soon as water starts to collect, you get informed.

The only thing you need is a Zigbee gateway to integrate this sensor with your TIS solutions and enable push notifications on your cell phone. This sensor doesn't require cables; just choose the right spot, and place it there! It is battery-powered and capable of notifying you of any water drips around your home.

Imagine spending all of Christmas in your childhood cabin with your family and resting assured that our water leakage sensor is protecting your home from water damage and minimizing the risk of requiring water repairs.

At TIS, we know that you'd probably prefer to have a pool in your backyard, not in the basement! So just trust this sensor, and let it watch over your property even when you're away. In addition to being able to take action in time, you can also lessen water wastage and save more.

You won't see pools under your washing machine. Even if the faucets or pipes are leaky, you can simply put this sensor on a stable surface and let it help stop the problem and prevent further damage. Want to experience the magic of smart houses? Try this Water Leak Sensor!
